RESOURCE: CASE STUDY (/RESOURCES/SEARCH-RESULTS?TYPES%5BCASE_STUDY%5D=CASE_STUDY)

Description:

This case focuses on the case of Greater Houston, Texas, one of the largest cities in human history. In Greater Houston, Texas, one of the largest cities in human history, exposure to toxins are found in Houston, and across much of the U.S.

This case study that links together the scientific measurement of pollution, the differential ways in which humans are

exposed to pollution, and an understanding of the socioenvironmental

systems at work in the creation of pollution. Using an online web tool

from the EPA called EJSCREEN, the primary assessment will be the construction of a side-by-side map that details the inequities in

exposure to pollution in a location that each student will select. This unit is intended to support two fifty-minute course meetings (i.e. one week during a fifteen week semester).
